

Assembly Table

air-cushioned

neusburger.com

EUR 2012

An innovative in-house development

The air-cushioned assembly table substantially facilitates operations for repair and assembly work on injection moulding, die casting and punching tools. By way of many air nozzles, an air cushion is created on the underside of the moveable pallets which enables light and easy movement of the mould halves.

How you benefit:

More efficient operating and increased productivity

- » separate control allowing unrestricted movement of both mould halves, without any effort
- » both mould halves are freely accessible without having to reposition or turn them around
- » sturdy table withstanding strong impacts
- » compact and simple design
- » load capacity up to 3.000 kg

Time and expenses saving

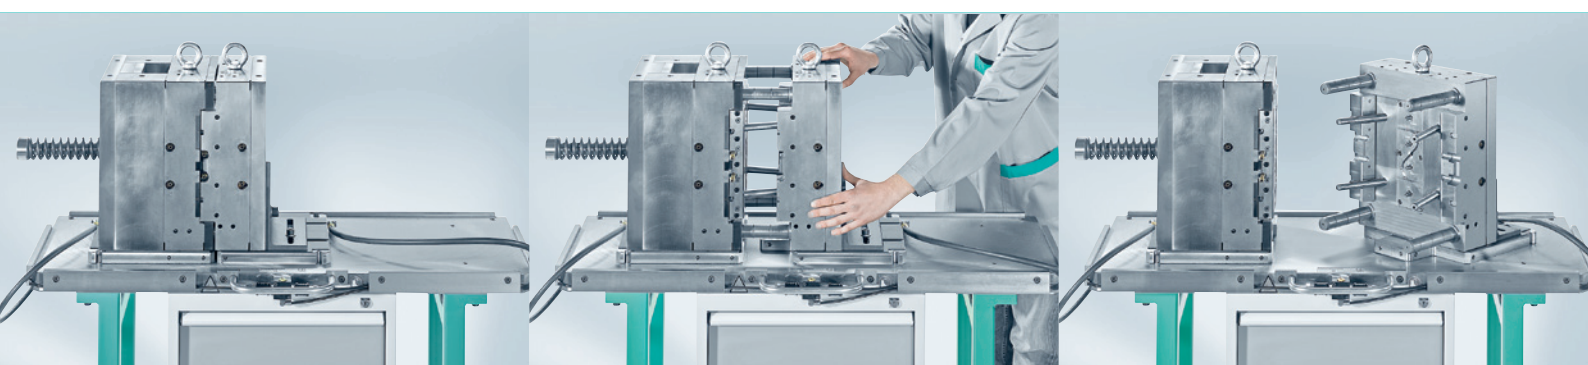

- » reduced fitting times
- » easy handling

More safety and protection

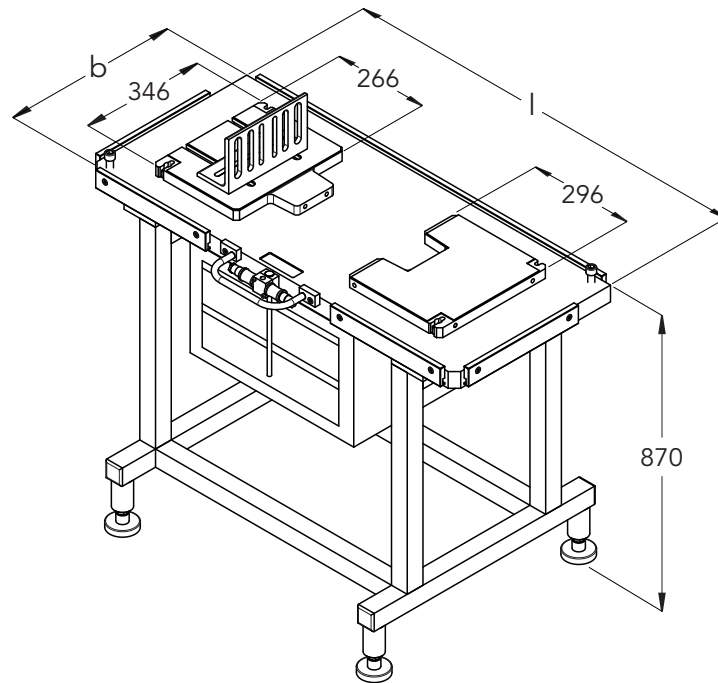

- » for the personnel
- » for the valuable tools
- » narrow mould halves can be fixed with a mounting bracket

CE Certification Machinery Directive 2006/42 EG
